Mom Knows Best

Moms really do notice everything – especially when it comes to *your* child. You know which stuffed animal they like most on stormy nights, and you know (and love!) that one unruly lock of hair – which no comb has ever tamed.

So of course you also noticed when your child was falling behind on the growth-curve -- *their* growth curve.

And just as you see everything, you'll also *do* anything you can to help your child. Whether it's cutting carrots into hearts or putting faces on pancakes – anything to keep them eating well and growing, becoming as big and healthy as they can be.

That's why moms like you count on the complete, balanced nutrition in PediaSure. In addition to the healthy meals and snacks you're already preparing, two daily servings of PediaSure will help your child gain weight in as little as 8 weeks

...And because you're a mom, you'll see your child's growth in all kinds of ways, as they step up to newer, bigger challenges every day.
